1376. Time Needed to Inform All Employees

Medium 1538 89 Add to List Share

A company has  $n$  employees with a unique ID for each employee from  $0$  to  $n - 1$ . The head of the company is the one with `headID`.

Each employee has one direct manager given in the `manager` array where `manager[i]` is the direct manager of the  $i$ -th employee, `manager[headID] = -1`. Also, it is guaranteed that the subordination relationships have a tree structure.

The head of the company wants to inform all the company employees of an urgent piece of news. He will inform his direct subordinates, and they will inform their subordinates, and so on until all employees know about the urgent news.

The  $i$ -th employee needs `informTime[i]` minutes to inform all of his direct subordinates (i.e., After `informTime[i]` minutes, all his direct subordinates can start spreading the news).

Return the number of minutes needed to inform all the employees about the urgent news.

Example 1:

Input:  $n = 1$ , `headID = 0`, `manager = [-1]`, `informTime = [0]`  
Output: 0  
Explanation: The head of the company is the only employee in the company.

Example 2:

```
graph TD; 2((2)) --- 0((0)); 2 --- 1((1)); 2 --- 3((3)); 2 --- 4((4)); 2 --- 5((5));
```

Input:  $n = 6$ , `headID = 2`, `manager = [2,2,-1,2,2,2]`, `informTime = [0,0,1,0,0,0]`  
Output: 1  
Explanation: The head of the company with `id = 2` is the direct manager of all the employees in the company and needs 1 minute to inform them all.  
The tree structure of the employees in the company is shown.

Constraints:

- $1 \leq n \leq 10^5$
- $0 \leq \text{headID} < n$
- `manager.length == n`
- $0 \leq \text{manager}[i] < n$
- `manager[headID] == -1`
- `informTime.length == n`
- $0 \leq \text{informTime}[i] \leq 1000$
- `informTime[i] == 0` if employee  $i$  has no subordinates.
- It is **guaranteed** that all the employees can be informed.
